Code	No: 133BQ JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY HYDERABAD
	B.Tech II Year I Semester Examinations, November/December - 2018
$\mathbb{R}^{\mathbb{N}}$ Time:	SIGNALS AND STOCHASTIC PROCESS (Common to ECE, ETM) Max. Marks: 75
Note:	This question paper contains two parts A and B.
	Part A is compulsory which carries 25 marks. Answer all questions in Part A. Part B consists of 5 Units. Answer any one full question from each unit.
	Each question carries 10 marks and may have a, b, c as sub questions.
8R 1	SR SR BART-A SR SR (25 Marks)
1.a)	Is the system described by the equation $y(t) = x(2t)$ time invariant or not? Why? [2]
b)	Give the relation between bandwidth and Rise time of a signal. [3]
c)	What are the effects of aliasing and how can you minimize the aliasing error? [2] Distinguish between series and transform in the Fourier Representation of a signal.[3]
$\left\{\begin{array}{c} d \\ e \end{array}\right\}$	Let $x(s) = L(x(t))$, determine the initial value, $x(0)$ and the final value $x(\infty)$, for the
The same of the sa	following signal using initial value and final value theorems. [2]
	$x(s) = \frac{7s+6}{s(3s+5)}$
f)	How the stability of a system can be found in Z-Transform and what is the condition for
	causality in terms of Z-Transform
★ g)	Prove that $R_{xy}(\tau) = R_{yx}(-\tau)$. If the customers arrive at a bank according to a Poisson process with mean rate 2 per
h)	minute, find the probability that during a 1-minute interval no customer arrives. [3]
i)	Prove that the power spectral density of a real random process is an even function. [2]
j)	That the auto correlation randomy.
8R	$\mathcal{S}(\omega) = \begin{cases} \pi, & \omega \le 1 \\ 0, & \text{otherwise} \end{cases}$ $\mathcal{S}(\omega) = \begin{cases} \pi, & \omega \le 1 \\ 0, & \text{otherwise} \end{cases}$ $\mathcal{S}(\omega) = \begin{cases} \pi, & \omega \le 1 \\ 0, & \text{otherwise} \end{cases}$
	(50 Marks)
2.a)	Prove that the set $sin mw_0 t$ and $sin nw_0 t$ are orthogonal for $m \neq n$, where
S ← b)	m = 0,1,2 ∞ and n = 0,1,2 ∞ , over to, $t_0 + \frac{2\pi}{\omega_0}$. Explain the concepts of unit step function and Signum function. OR
3.a)	Explain causality and physical reliability of a system and explain Paley-wiener criterion.

Explain causality and physical reliability of a system and explain Paley-wiener criterion.

b) Consider a stable LTI system characterized by the differential equation: $\frac{dy(t)}{dt} + 2y(t) = x(t)$ Find its impulse response.

[5+5]
